GitHub: github.com/HarrodPablo

Portfolio: portfolio-pabloharrod.vercel.app

Full-Stack Software Engineer with a proven track record of designing, architecting, and deploying scalable web, mobile, and cloud applications using the JavaScript and TypeScript ecosystem (React, Next.js, and Node.js). Specialized in relational database modeling (PostgreSQL, Prisma ORM), RESTful APIs, multimodal AI integrations (Google Gemini API), and Linux VPS infrastructure with Docker and Nginx. Focused on delivering end-to-end production systems across Healthcare IT, E-Commerce, and SaaS.

Technical skills

Frontend: React.js (v18/v19), Next.js 14 (App Router), TypeScript, JavaScript (ES6+), Vite, Tailwind CSS (v3/v4), TanStack React Query, Zustand, Framer Motion, HTML5, CSS3.

Backend y Bases de Datos: Node.js, Express.js, PostgreSQL (Neon / Supabase), Prisma ORM, MongoDB, APIs RESTful, Autenticación JWT, OAuth 2.0 (Passport.js), Zod.

Mobile, Cloud y DevOps: Docker, Linux VPS (Ubuntu), Nginx, PM2, Vercel (CI/CD), Cloudinary CDN, Capacitor 8 (Android APK / PWA Offline-First), IndexedDB, Git, GitHub, Postman.

IA e Integraciones: Google Gemini API (IA Multimodal / OCR), Google Workspace APIs (Google Sheets API v4), Nodemailer (SMTP), Desarrollo asistido por IA (Cursor).

Professsional Experience

Full-Stack Software Engineer | Independent Consultant 2024 - Present

● **Healthcare IT — Web PACS & DICOM Medical Portal (Radiología López**): Engineered and deployed an end-to-end radiology platform integrated with an Orthanc PACS server and Agfa DR100E digital X-ray equipment. Built a secure Node.js and Express reverse proxy with ephemeral tokens to stream DICOM studies into an embedded Stone Web Viewer, implemented strict Role-Based Access Control (RBAC/JWT), automated patient study matching by National ID in PostgreSQL via Prisma ORM, and deployed on a Linux VPS (Ubuntu, Docker, PM2, Nginx).

●**AI-Powered E-Commerce, ERP & CRM (Good Shop Premium**): Architected a comprehensive storefront and administrative backoffice powered by Google Gemini 2.5 Flash for automated supplier invoice OCR. Implemented atomic inventory deduction for individual items and composite kits, scheduled Cron jobs for chemical batch expiration alerts, financial analytics dashboards, and A4 PDF quote generation.

● **E-Commerce, TypeScript Web Platforms & Offline-First Mobile Apps**: Developed the New North cycling e-commerce platform featuring real-time multi-criteria filtering, automated financial pricing breakdowns, and a Test Ride booking wizard (React, Express, PostgreSQL, TanStack Query, Cloudinary); built an interactive editorial web platform in Next.js 14 and TypeScript 5.6 featuring a custom-coded polymorphic iPhone hardware simulator; created an idempotent bilingual RSVP serverless engine synced with Google Sheets API v4; and shipped a native Android APK/PWA (7 Wonders Score Calculator) with a 100% offline-first architecture using Capacitor 8, Zustand, and IndexedDB.

Full-Stack / Frontend Developer | Ikigai Technology 2023 - Present

● Spearheaded the frontend architecture and migration of the primary corporate web platform (Ikigai II) into a high-performance Single Page Application (SPA) using React 18, Vite, Tailwind CSS, DaisyUI, and React Router DOM v6.

● Engineered a modular atomic component library with native dark mode and a dual B2B lead-capture engine integrating React Hook Form with a REST email dispatch service and direct WhatsApp channel, eliminating full-page reloads and increasing user retention.

Educación

● **Tecnicatura en Programación** - Universidad Tecnológica Nacional (UTN TUC) | 2021 - 2023

● **Full Stack Web Development Specialization** - Rolling Code School | 2024

● **Cloud & Serverless Architectures Specialization** - Udemy | 2025

● **Prompt Engineering & Generative AI for Developers** - DeepLearning.AI (Coursera) | 2025

● **Languages:** Spanish (Native), English (B2 - Technical and Conversational)
